

Magic Organs, pp 6,7

Jump, June 2019

download free at www.gradus.cz

1. Label the picture with: *heart, lungs, liver, stomach, kidney, small intestine, large intestine.*

2. Listen and fill in the gaps.

Heart: It beats _____ times a day, and pumps a total of 7,571l of blood round _____ km of blood vessels!

Liver: Your liver is the only organ in the body that can _____ back after injury or surgery.

Stomach: Your stomach makes acid to break down the food that you eat. When you blush, your stomach is _____, too

Kidneys: Your kidneys filter 189l of blood each day through _____ km of tubes.

Lungs: They are the only organs that can float on water – they're _____ of air. Your right lung is bigger than your left one.

3. Match A to B to make sentences.

A

The heart

The liver

The stomach

The kidneys

The lungs

The small intestine

The large intestine

B

... breaks down the food.

... filter blood.

... pumps blood.

... absorbs the good things from food.
